

## Multi-Stage Docker Build

```
1 FROM node:20-alpine as build
2 WORKDIR /app
3 COPY package*.json ./
4 RUN npm install
5 COPY . .
6 RUN npm run build
7
8 FROM nginx:alpine
9 COPY --from=build /app/dist /usr/share/nginx/html
10 EXPOSE 80
11 CMD ["nginx", "-g", "daemon off;"]
```

itu contoh multi stage pada build front end.

cirinya:

1. ada 2 from (node:20-alpine dan nginx:alpine)
2. biasanya ada yang build dan sisanya tinggal menggunakan

kelebihan:

ukuran jauh lebih kecil sehingga lebih cepat build
